

Cartarian Constitution (litepaper).

Lost to time, the 19th Century is at once familiar and as alien as can be imagined. **Steampets of Cartaria** seeks to recreate this Golden Age of ingenuity and architecture, with a re-imagined Steam Punk aesthetic and accurate recreations of lost 19th Century wonders.

Most believe history to be a done deal, all the sources are there, we know what happened down to the names, dates and hairstyles. Others are less sure. We seek to delve into this murky past and give it new life on the Blockchain. A treasure trove of ancient buildings and treasures have been lost in the past 2 centuries, preserved only in grainy black and white photographs and the written testimony of those who were purportedly there.

We want to preserve these puzzle pieces, and further, preserve them in a trust-less medium for posterity. And recreate them in the **Steamverse**.

Further, we want to build out a fantasy universe of an advanced High tech Victorian world with these lost buildings as a backdrop to comic books, stories and videos, starring an eclectic mix of “Steampets”. Fun and interesting “animalified” characters complete with backstories and roles in universe.

Superficially a CNFT project, the Steampets Universe will be populated with Steampunk themed animals which will be usable as “trading cards” for various games we plan to implement. As such they will have attack and defence statistics, as well as tiers of rarity and epoch. Refer to **NFT mechanics**.

But Steampets of Cartaria is more.... We want to record history, but we also want to fund research into the old world, have LIDAR surveys done of ancient sites, pay for excursions for the purpose of exploration, drone

surveys, meetups, the funding of writing and content creators. In short we want to research and create a fun community. We also plan to buy existing buildings from the old world with the aim of preserving them for posterity. So many of these architectural wonders are being lost to neglect, greed and poverty. We want to stand between these irreplaceable buildings and the wrecking balls, both physical and metaphorical.

Tokenomics:

Token

Total supply 1,850,000,000

Distribution:

10% founders

10% project funds

20% drops/yield farming

60% Distributed to NFT purchasers, giveaways, discretionary drops, sold at auction and auctioned in bundles, as well as burn auctions.

After Epoch 2 is complete, the only way to purchase NFTs will be via \$spC token. It will also function as the currency within the ecosystem we build out.

NFTs

Released by epoch.

Epoch one: First 13 NFTs

Epoch two: Main set of 1815.

Epoch three: Any additional NFTs.

Exceptions are one-offs and Mystical rarity, exist outside Epoch structure.

EPOCH one NFTs entitle holders to a banner on the “Steampets HQ” which is the image on our website homepage. Epoch one characters will also be the main protagonists in the canon of comic book stories, games and cartoons, and the primary story tellers within the Cartarian Steampets universe. All epoch one NFT owners will be credited in literature created.

Epoch one and Epoch two NFTs will entitle the holder to access to the “odd fellows of Cartaria” secret society which will give them exclusive

access to NFT drops, token drops and the Cartarian ADA staking pool, as well as more perks to come, including the opportunity to join and vote on what kinds of historical research Steampets will be funding.

Epoch 3 and beyond will require to be purchased using spC native token either @ auction or directly via our website.

An additional benefit of being a coin holder will be liquidity farming. We will drop tokens to all wallets holding NFTs, and additionally, all wallets providing us with DEX liquidity, such as Sundaeswap. APY will be determined by epoch and rarity.

Team bio

Raymond “Yggy” Thomson is a famous, or perhaps infamous, character in crypto, the co-founder of the first mover meme coin on the XRP ledger, Xrdoge, with an ATH marketcap of \$200 million, millionaires were made and dreams came true for many.

Alas Yggy is a stubborn character, with high ideals, and not only believes in decentralised money, but also in decentralised values. He made too many enemies in the XRPL cliques, obsessed with their KYC and centralization of influence. Xrdoge ticks happily onward however, a testament to the solid foundations laid in part by Yggy. One thing he still knows how to do is make a successful crypto project that can make investors rich. An Electronic Engineer in a former life, and an anarchist by disposition.

Andrew “TNG” Dyson Crypto influencer, video producer, memelord, guerrilla marketing specialist, researcher, podcast producer, that is just a glimmer of TNG’s portfolio of positive attributes. As an SPC Co-founder his experience and abilities are being brought to the table to further the goals of the project.

Steampets of Cartaria marks a turning point and the next stage of a journey into the timeline of the Earth for TNG, a chance to investigate the terrain and unravel the mystery of history.

Prior to his journey into the world of alternative media and the Crypto space TNG is a trained chemist and has many years of experience earned as both a technical manager and sales & marketing manager in industry.

Kris “Digital Ronin X” Barros Born on the East Coast of the USA at Cape Cod in Massachusetts, DRX is a very humble and empathic individual bubbling over with creative talent.

Presently working for the XRPLedger’s premium memecoin, Xrdoge as their resident and most notorious meme lord, he is also employed by Greencare Collective as a cultivator. The guy clearly never sleeps.

His experience & great passion for Crypto along with his outstanding artistic abilities and interest in the old world make him a perfect match to the Steampets project.

Believe it or not DRX has hobbies as well as a busy career path. Magnets, Crypto investing, investigating Antiquatech and Free energy devices are big interests of this

Stephanie “Island Ghost”

Mellott Stephanie is a US Navy Veteran whom served in Operation Desert Storm, she sailed AROUND the plane three times by the age of twenty four.

She was awarded numerous medals during her service including the Battle E Southeast Asia Combat star.

Stephanie was also a real estate professional for over 20 years.

Mother of a twenty two year old son working in cybersecurity, he is a pursuer of cyber criminals.

Not only a US Navy veteran but also a veteran of the Crypto space, she started mining Bitcoin with her then nine year old son in 2009 so he could buy trinkets for his action character in a video game (who knew?). She took the original Learn and earn classes from Satoshi for Bitcoin.

Steph likes to spend her free time on the Beaches of Hilton Head with her Service Dog
